

# ROOM DISPLAY

Book your meetings quickly and easily

Room Display is a touchscreen device that uses the ZAsset Booker Room Display App for optimal interactive management of corporate meeting rooms.

- Available in 10-inch versions
- Intuitive signage via LED bar
- Ethernet connectivity with PoE+ power supply
- Use in always on mode

Placed at the entrance of meeting rooms or other bookable spaces, the device allows you to:

- obtain instant information on the status of each room (available, occupied, awaiting check-in);

- immediately choose the space with the most appropriate features for the meeting to be held (seating capacity, technological equipment, etc.);
- book or cancel with a daily and weekly datebook and instant booking functions;

- prevent conflicting and overlapping bookings;
- synchronise appointments in Microsoft Exchange and Google Calendar;
- confirm occupancy and release through check-in and check-out

## FUNCTIONS

Room Display instantly provides all users with the following information:

- Names of the spaces, with features, equipment and images;
- Status, graphically highlighted on the monitor and integrated with the LED bars on the display (green=available, red=busy);
- Details of the next meeting or the meeting in progress, identifying the organiser, the subject of the meeting and the booked time slot, which can be hidden where confidentiality is required;
- Agenda of the day, with details of the available/occupied time slots and an option to change the date through interaction with the monthly calendar.

## DETAILS OF HOW IT WORKS

Booking can be done in two ways: by scanning the QR code of the bookable space using the ZAsset Booker app, running on the organizer's device, or through the instant booking functionality directly from the display. The user can occupy the first available slot or can use all the features on board apps to make a more complete booking,

choosing the date and time slot, adding the name of internal and external participants, services and the reason for booking the room.

With the ZAsset Booker Room Display App you can also confirm and complete the use of the meeting space by registering check-in and check-out.

## TECHNICAL FEATURES

|                             |                                                                                                                                                                                                                                                                                           |
