## Zucchetti access control and time & attendance SYSTEMS FOR TOYOTA TURNKEY SECURITY!

Toyota Motor Corporation was established in 1937 as a ramification of the Toyoda Automatic Loom Works, an important Japanese textile industry. Today, there are 15 active plants only in Japan, and another 43 production centres in 26 countries around the world. Four of them are in Europe: one in Germany, one in Portugal, one in England and the fourth one in France. Due to all these plants, Toyota, a worldwide leader in the automotive field, produces more than 9 million cars a year. Toyota Motor Italia S.p.A. was founded in 1996 and since then the sales volume has increased exponentially, positioning itself in the top ten of the automotive producers. The consolidation of Toyota on the Italian market is an already acknowledged fact: Toyota is currently present on the entire peninsula with more than 240 dealers, 225 service centres, a spare parts distribution centre and specific customer services.

## case history

### Client Requirements

The head office of TOYOTA MOTOR ITALIA SPA is visited by a great number of people, besides its employees. Moreover, within the same head office, there are access areas limited to certain specific job profiles, for security and privacy reasons. This situation created the need to regulate entrances and limit the visits of certain areas by setting up access profiles and precise schedule models: everything was done in the most practical, modern and efficient way.

At the same time, in order to improve both the access control management and the time and attendance management, TOYOTA MOTOR ITALIA SPA needed an information system that would allow a faster and more efficient HR management.

### Achieved Project

TOYOTA MOTOR ITALIA SPA has found in Zucchetti solutions the most innovative and efficient tools on the market, thanks to the perfect integration of software solutions with hardware tools for time & attendance.

The introduction of Access Control Management Web, linked to Zucchetti access control terminals, has allowed to efficiently monitor the access of employees, visitors and vehicles within the company's premises, through doors, gateways, bars or turnstiles. This integration allows acquiring, validating and monitoring the passes in real time, based on the access rules and authorizations preset in the predefined database (time slots, days of the week). As a result, the system perfectly meets the company requirements, because it complies with all the security criteria required for a cutting-edge access control system. Furthermore, in order to comply with the specific security requirements of TOYOTA MOTOR ITALIA SPA, certain access profiles have been configured, based on the company policies and linked to the lists of users, visitors and vehicles authorized at the entrance.

Moreover, Zucchetti has also been dealing with the complete automa-

tion of collection, control and management processes of employees' time & attendance data. Owing to the integration of Time & Attendance Management software with Zucchetti time & attendance terminals, the administration may now manage any type of schedule based on the labour agreement, it may supervise the possible anomalies according to predetermined models, it may control data related to the employees' time & attendance, it may have at its disposal all the data available for analysis and report management and it may print the timesheet as provided by law.

### Why Zucchetti?

#### Sabrina Caputi - HR Development Manager

Our company has always shown great care and attention in providing exclusive products and services to its clients in terms of technology, reliability and quality. This continuous search for efficiency clearly concerns the suppliers as well, whose deliveries must meet high quality and quantity standards. Zucchetti has always acted in accordance with these requirements, constantly proving its reliability and efficiency.

In fact, Zucchetti knows how to deal with all the specific and critical issues occurring during the access control and time & attendance computerization process, brilliantly complying with the high company standards established in terms of security and time & attendance management. Everything has been done with just a small impact on our revenue account.

Ultimately, Zucchetti solutions, offering remarkable benefits in terms of improvement of access control and time & attendance management, have allowed us to dedicate more energy and resources to our core activities.
